

TNT Flexible Pipe (Flexible Water Distributing Pipe for Bridge)

Features

- TNT Flexible Pipe is a pipe which can bend flexibly and is a flexible water distributing pipe for bridge which can adjust at bridge construction site.
- Due to its long piping, it needs few joint quantity compared to PVC pipe.
- Reduced joint made the maintenance cost lower because the cleaning necessity of pipe clogging becomes less.

Applications

- Drainage of elevated highway, etc.

- These descriptions can be altered for a reason of improvement without any notification.
- These descriptions shall be as of April 1, 2010.
